

| FCHM SERIES

HYDROMATIC PUMP CONTROL MODULE

Supply voltage	240Vac 50-60Hz
Max operating power	2HP
IP Rating	65
Max pressure	10 bar
Max flow rate	100 l/min
Max fluid temperature	60°C
Max ambient temperature	60°C
Minimum start-up pressure adjustable	1 - 3.5 bar
Pump shutdown Flowrate	1.5L/min.
Minimum output pressure(Pump max pressure)	> = start-up pressure plus 1.0.bar

A compact unit, which combines all the functions of a complete pressurising system, ie. Pressure Switch, Dry Running cut-out, Control Panel, Pressure Reservoir and Non-return Valve. The system employs a hydraulic chamber, equipped with a damping system to protect against water hammer, and a patented electromechanical control board, to be connected to 240Vac power source, with an internal 24V secondary circuit.

Compared with conventional systems this is not only more compact, but easier and quicker to install, and makes for significant energy savings and reduced pump wear. It is also maintenance free, as the pressurisation unit does not require precharging with air.

This system combines the versatility and control of conventional pressure switches with the advantages of pressure/flow switches.

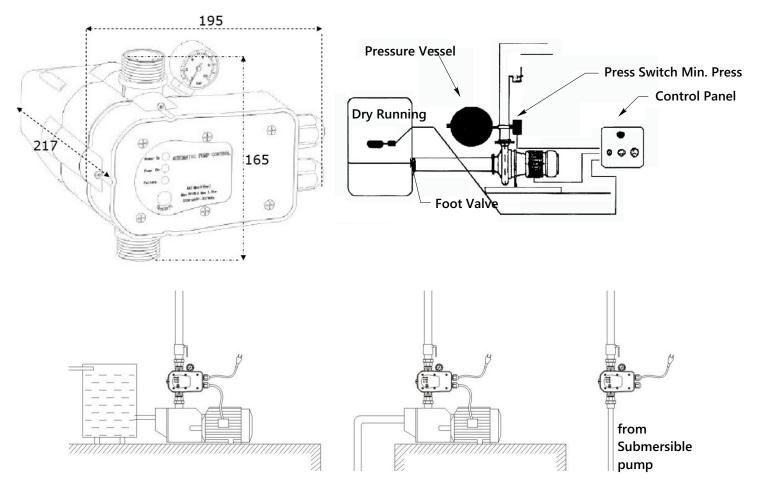

Avoids the need for pressure reservoirs, along with their associated maintenance costs.

Features

- Start up pressure 1-3.5 bar, adjustable
- Dry running cut out and foot valve
- Visual Indication and manual reset for water circuit faults
- Pressure gauge for easy set up
- Auxiliary fuse to protect pump control circuit

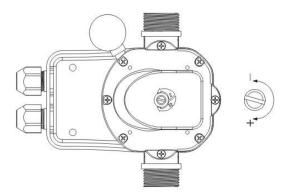

Always install a pump that develops a maximum output pressure that is at least 1 bar greater than the required minimum start up pressure.

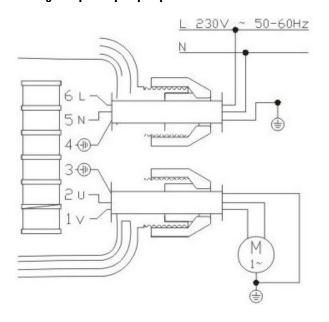

If the head to be pumped is greater than 15m, it is necessary to increase the start up pressure setting e.g. 20m head requires at least 2.5 bar start up pressure, 25m head requires at least 3 bar start up pressure.

To increase the start up pressure setting:

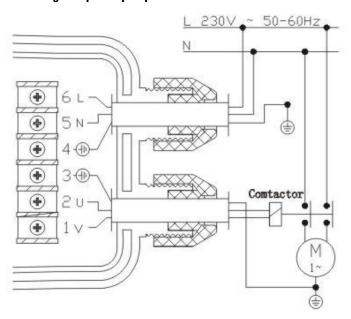

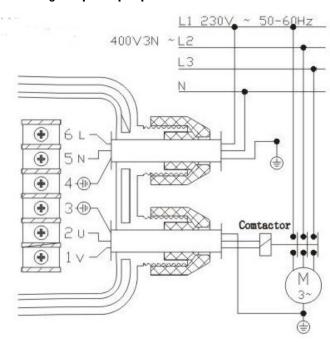

Wiring for 1phase pumps up to 2HP

Wiring for 1phase pumps over 2HP

Wiring for 3phase pumps

Made in the UK
